

TURBOCHARGER FITTING INSTRUCTIONS

To obtain optimum performance and to reduce the possibility of damage or failure of turbocharger, please follow these simple guidelines when installing the unit.

- With the fitment of any new turbocharger, it is essential to change the used engine oil and filter.
- Ensure the oil feed pipe is clean and free from contamination. It is essential to thoroughly flush the oil feed pipe and oil return pipe. Also, if necessary, the intercooler.
- Install the turbocharger using the data from the appropriate workshop manual.
- Prevent the engine from starting, crank the engine until oil flows in and out of the turbocharger. On some vehicles it can take up to 1 minute for oil to reach the turbocharger. The oil drain can be temporarily disconnected to witness this.
- Once an oil supply is confirmed; start the engine and always allow the engine to idle for at least 2 minutes. Finally check for any leaks of exhaust gas or fluid before a road test.

WARRANTY INFORMATION

All non-competition turbochargers carry a 24 month or 24,000 mile warranty (whichever occurs first), from the date of invoice and are subject to the stated fitment precautions being met. Turbochargers returned for warranty purposes must not be dismantled prior to the claim and supporting information must be provided.

Please contact us on 0808 100 2837 and request a Warranty Failure Report Form, which can be posted, faxed or emailed to you. Please fully complete the report form and return it with the turbocharger. Technical staff will be unable to discuss the turbo with you until it has been received.

All warranty claims are subject to our inspection and analysis test procedures to determine the cause of failure. Warranties will be issued on the sole basis of our warranty test results and findings.
